                                                                                                                                                             셤
                                                                                                                                                                                      8
                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes a method (M1) for screening for an antinoplastic agent. The method involves exposing cells to a chemical agent conclusion of at least one gate (1) of a signature gene set, where (1) expression of at least one gate (1) of a signature gene set, where (1) comprises a sequence (S) selected from 8447 sequences (given in ABL61664 to ABL70110), or is at least 95% identical to (S), where a change in expression is indicative of anti-neoplastic activity. (I) has eyeostatic expression is indicative of anti-neoplastic activity and can be used in gene therapy. M1 can be used for screening an anti-neoplastic agent, and can be used for producing a product which is the data collected with respect to the anti-neoplastic agent as a result of M1, and the data is sufficient to convey the chemical structure and/or properties of the agent. M1 can be used in the treatment of cancer such as colon, breast, scomach, lung, thyroid, oesophageal, ovarian, kidney, cancer, infiltrating lobular cancer, squamous cell carcinoma, neuroendocrine carcinoma, papillary carcinoma and Wilm's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        336

Screening for anti-neoplastic agent involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, and determining a change in expression of a gene of a signature gene set.

Claim 1; SEQ ID NO 6941; 44pp; English

The present invention describes a method (M1) for screening for an anticomplastic agent. The method involves exposing cells to a chemical agent
to be tested for anti-neoplastic activity, determining a change in
expression of at least one gene (I) of a signature gene set, where (I)
comprises a sequence (S) selected from 8447 sequences (given in ABL61664
comprises a sequence (S) selected from 8447 sequences (given in ABL61664
comprises in indicative of anti-neoplastic activity. (I) has cytostatic
activity and can be used in gene therapy. M1 can be used for screening an
anti-neoplastic agent, and can be used for producing a product which is
anti-neoplastic agent. M1 can be used in the treatment of cancer such
to fm1, and the data is sufficient to convey the chemical structure and/or
properties of the agent. M1 can be used in the treatment of cancer such
as colon, breast, stomach, lung, thyroid, ossophageal, ovarian, kidney,
prostate or pancreatic cancer, adenocarcinoma, clear call
cancer, infiltrating ductal cancer, infiltrating lobular cancer, squamous
cell carcinoma, neuroendocrine carcinoma, papillary carcinoma and Wilm's

                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a novel method for diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma or metastatic liver tumour in a patient, and differentiating metastatic liver cancer from hepatocellular carcinoma in a patient, involving detecting the level of expression of two or more genes represented in ABN93503-ABN97455 in a cissue sample. The method of the invention has hepatocropic, and cytostatic activity. The method is useful for diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma and metastatic liver carcinoma in a patient. The method is useful for identifying expression profiles which serve as useful diagnostic markers as well as markers that can be used to monitor disease states, disease progression, of rung toxicity, drug efficacy and drug metabolism. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the wipo.int/pub/published_pot_sequences

New cDNAs, which are differentially expressed in (metastatic) breast cancer useful for diagnosing or staging, breast cancer, or for monitoring the treatment of breast cancer in an individual.

Claim 1; SEQ ID NO 36; 30pp; English

The invention describes a combination of cDNAs (designated BC-CDNAs), which are differentially expressed in breast cancer. The combination includes 152 cDNA sequences, or their complements. The protein encoded by any of these BC-CDNAs is useful for screening several molecules or compounds to identify at least one ligand that specifically binds the protein, producing or preparing polyclonal or monoclonal antibodies, or burifying antibodies from a sample. The antibodies which specifically bind the protein differentially expressed in breast cancer is useful for detecting the expression of a protein in a sample. The BC-CDNAs are also useful for diagnosing, monitoring the treatment of, or staging, breast cancer associated CDNA. Note: The sequence data for this patent did not form a part of the printed specification, but was obtained in electronic format directly from the US patent office at segdata.uspto.gov/sequence.html?DocID=20020156263

cons that encode polypeptide of human caldesmon were selected from a clones that encode polypeptide of human caldesmon were deduced by DAB sequence and the amino acid sequence encoding human caldesmon were deduced by DAB sequence analysis. Next, the inventors prepared polypeptides of various lengths, and looked for the functional domain of human caldesmon polypeptide, the functional domain of human caldesmon polypeptide. There are two forms of caldesmon. The form of higher mol. Wt. is called type I and the form of lower mol. Wt. is called type II. 312AA is a not polypeptide that is the C-terminal portion of types I and II. 122AA and called type I and that is the C-terminal portion of types I and II. 122AA and sequence of 312AA, and 94AA and 90AA are polypeptides that have a sequence of 118 AA that are in the central portion on the N-terminal continual portion of 118AA, there are residues Met-Ala that originated from a PCR primer, of 118AA, there are residues Met-Ala that originated from a PCR primer. Criginated from a PCR primer. Or the N-terminal of 90AA, there are residues Met-Ala that originated from PCR primer. The polypeptide of 116 AAA has both originated from PCR primer. The polypeptide of 116 AAA has both originated from a crivity and activity to binding activity Type I, type II, 312AA, 118AA, 11

Sequences AAH33071-23152 represent nucleic acid sequences derived from osteoarthrits tissues. The sequences are useful as probes and for the diagnosis or prognosis of mammalian osteoarthritis. The polymucleotides and holypeptides of the invention are useful for generating diagnostic reagents, as targets for small molecule drug development, generation of therapeutics, and cloning genes Specific antibodies are used to generate invented memosorbent assays for detection of osteoarthritis. The invented molecules can be used to treat osteoarthritis or to analyse the disease-modifying activity of osteoarthritis drugs. Other disorders treatable using the nucleic acid sequences include atopic, inflammatory and infectious disorders e.g. Crohn's disease and sepsis, and wound healing

Claim 1; Page 118-119; 144pp; English.

containing that encode polypeptide of human caldesmon were selected from a containing activity and addreed by DNA sequence and the amino acid sequence encoding human caldesmon were deduced by DNA sequence analysis. Next, the inventors prepared polypeptides of various lengths, and looked for the functional domain of human caldesmon polypeptide, and looked for the functional domain of human caldesmon polypeptide, to using calmodulin-binding activity and actin-binding activity as indices. There are two forms of lower mol. Wt. is called type I and the form of lower mol. Wt. is called type II. 312AA is called type I and the form of lower mol. Wt. is called type II. 312AA and 9AA and 90AA are polypeptides that have a sequence of 116 ABs in the C-terminal portion of 118AA. I acking sequence of 312AA, and 9AA and 90AA are polypeptides that have a sequence of 118AA, there are residues Met-Ala that originated from a PCR primer. Or 118AA, there are residues Met-Ala that originated from a PCR primer. Or ilginated from a PCR primer. Or originated from a PCR primer. Or the N-terminal of 90AA, there are residues Met-Ala that originated from PCR primer. The polypeptide of 116 AAS has both calmodulin-binding activity and actin-though activity. Type II, 1312AA, 112AA, 112AA, 112AA, 112AA, 112AA, 112AA, 112AA, 113AA, 112AA, 113AA Polypeptide(s) with calmodulin- and actin binding activities - useful for treating and diagnosing cancer and regulating digestive tract motility as vasodilators. CC conse that encode polypeptide of human caldesmon were selected from a containing the containing the containing the containing the containing the containing the containing the containing the containing calculated polypeptides of various lengths, and looked for the functional domain of human caldesmon polypeptide, and looked for the functional domain of human caldesmon polypeptide, and looked for the functional domain of human caldesmon polypeptide. There are two forms of caldesmon. Wt. is called type II. 312AA is a contained form of lower minal portion of types II. 312AA is and contained that is the C-terminal portion of types II. 312AA is and contained that is the C-terminal portion of types II. 312AA is and sequence of 312AA, and 94AA and 90AA are polypeptides that have a sequence of 116 AAS in the C-terminal contained that are in the central portion. On the N-terminal contained the N-terminal portion and the C-terminal portion. On the N-terminal contained from a PCR primer. Contained from a PCR primer. On the N-terminal of 109AA, there are residues Met-Ala that chain also contained the contained the contained the contained the contained the contained the contained the contained the contained the contained the contained contained the contained contained the contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained contained cont

count clones that encode polypeptide of human caldesmon were selected from a count of the calls, and the DNA sequence and the amino acid sequence encoding human caldesmon were deduced by DNA sequence analysis. Next, the inventors prepared polypeptides of various lengths, analysis. Next, the inventoral prepared polypeptides of various lengths, and looked for the functional domain of human caldesmon polypeptide.

There are two forms of caldesmon. The form of higher mol. wt. is called type I and the form of lower mol. wt. is called type II. 312AA and plypeptides that have a sequence of 116 AAS in the C-terminal portion of types I and II. 122AA and calculated the central portion of 118AA, lacking sequence of 88 AAS that are in the central portion of 118AA, lacking count the N-terminal portion and the C-terminal portion. On the N-terminal corrections of 118AA, there are residues Met-Ala that calculated from a PCR primer. Called the N-terminal of 90AA, there are residues met are residues met Ala that also criginated from a PCR primer. On the N-terminal of 122AA and 94AA, there are residues met N-terminal of 90AA, there are residues met Ala that also criginated from a PCR primer. On the N-terminal of 122AA and 94AA, there

are residues Met-Ala that originated from PCR primer. The polypeptide (typeI, typeII, 312AA, 122AA, 118AA, and 116AA) that contains the bolypeptide of IIG AAs has both calmodulin-binding activity and actin-binding activity. Type II, 312AA, 122AA, 118AA, 116AA all have tropomyosin-binding activity and have an inhibitory activity to actomyosin ATPASS, and have an inhibitory activity to identified as being 116AA. (Updated on 25-MAR-2003 to correct PA field.) (Updated on 25-MAR-2003 to correct PA field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AGCCGGCAGCCTCGGATCTTCCTGTTGCTGAAGGTGTACGCAACATCAAGAGTATGT

count state that encode polypeptide of human caldesmon were selected from a cDNA library prepd. from HeLa cells, and the DNA sequence and the amino acid sequence encoding human caldesmon were deduced by DNA sequence analysis. Next, the inventors prepared polypeptides of various lengths, analysis. Next, the inventoral prepared polypeptides of various lengths, and looked for the functional domain of human caldesmon polypeptide. There are two forms of caldesmon. The form of higher mol. wt. is called type I and the form of lower mol. wt. is called type II. 312AA and 194A and 194A are polypeptides that have a sequence of 116 AAS in the C-terminal sequence of 88 AAS that are in the central portion of 118AA, lacking sequence of 88 AAS that are in the Certeminal portion. On the N-terminal continue Met-Ala that are in the Certeminal portion. On the N-terminal continue Met-Ala that are in the central portion. On the N-terminal continue Met-Ala that also and on the N-terminal of 90AA, there are residues Met-Ala that also criginated from a PCR primer. On the N-terminal of 122AA and 94AA, there

are residues Met-Ala that originated from PCR primer. The polypeptide (typeI, typeII, 312AA, 122AA, 118AA, and 116AA, that contains the bolypeptide of 116 AAs has both calmodulin-binding activity and actin-binding activity. Type I, type II, 312AA, 122AA, 118AA, 116AA all have tropomyosin-binding activity and have an inhibitory activity to actomyosin Arpaes, and so the functional unit of human caldesmon is identified as being 116AA. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CCCAAACCTTCTGACTTGAGACCAGGAGACGTATCCAGCAAGCGGAACCTCTGGGAAAAG

The present sequence is one of a large number of 5' ESTs derived from nRNAs encoding secreted proteins. An ORF has been identified within the sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. Esquences usually correspond mainly to the 3' untranalated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating CDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with inteact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. S' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        2157
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1559
                                                                                                                                                                                                                                                                                                                                               The invention relates to a method for diagnosing a disorder characterised by expression of a human cancer associated antigen precursor coded for by a nucleic acid molecule (NAM). The method comprises: (a) contacting a biological sample isolated from a subject with an agent that specifically binds to the NAM, an expression product or a fragment of an expression product complexed with an HLA molecule; and (b) determining the interaction between the agent and the NAM or the expression product determining the cheramination of the disorder. The products and methods can be used in the diagnosis, monitoring, research, or treatment of conditions characterised by the expression of various cancer associated antigens. The invention provides nucleic acid sequences and encoded polypeptides which are cancer associated antigen precursors expressed in human breast cancer, renal cancer, colon cancer, gastric cancer, prostate cancer and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               360

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a method for diagnosing a disorder characterised by expression of a human cancer associated antigen precursor coded for by a nucleic acid molecule (NAM). The method comprises: (a) contacting a biological sample isolated from a subject with an agent that specifically binds to the NAM, an expression product or a fragment of an expression product complexed with an HLA molecule, and (b) determining the interaction between the agent and the NAM or the expression product determination of the disorder. The products and methods can be used in the diagnosis, monitoring, research, or treatment of conditions characterised by the expression of various cancer associated antigens. The invention provides nucleic acid sequences and encoded polypeptides which are cancer associated antigen precursors expressed in human breast cancer, renal cancer, colon cancer, gastric cancer, prostate cancer and

AAH32943 to AAH37195 and AAG73514 to AAG77788 represent human colon cancer-associated nucleic acid molecules (N) and proteins (P), where the proteins are collectively known as colon cancer antigens. The colon cancer antigens have cytostatic activity and can be used in gene therapy cancer antigens have cytostatic activity and can be used in gene therapy and vaccine production. N and P may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate P expression. For example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of P by expressing inactive proteins or to that affect the activity of P by expressing inactive proteins or to supplement the patients own production of P. Additionally, N may be used to produce the colon cancer-associated Ps, by inserting the nucleic acids into a host call and culturing the cell to express the proteins. N and P can be used in the prevention diagnosis and treatment of colorectal carcinomas and cancers. AAH37196 to AAH37204 and AAB77789 represent carcinomas and cancers. AAH37196 to AAH37204 and AAB77789 represent to publication, meaning no sequences are present for SEQ ID NO:1027 time of publication, meaning no sequences are present for SEQ ID NO:1027 3183 AGAAAAATGAACCGTAGTTTTTTTTTTTAAATACAGAAGTCATGTTGTTTCTGCACTT 3242 3243 TATAATAAAGCATGGAAGAAATTATCTTAGTAGGCAATTGTAACACTTTTTGAAAGTAAC 3302 493 AGAAAAAGGAACCGTAGTTTTTTTTTTTTAATACAGAAGTCATGTTGTTTCTGCACTT 552 Nucleic acids encoding 4277 human colon cancer-associated polypeptides, useful for preventing, diagnosing and/or treating colorectal cancers.
